HYGIENE

veWhygiene

PROTECTING YOUR FRONTLINE

VEWhygiene is a division of TLW and has been launched to support the many challenges facing our valued clients.

Covid-19 has changed the world we live in and we now all have a responsibility to do what we can to prevent the spread of this disease.

The range includes high demand, quality products that will help keep you, your staff and your customers safe. Hygiene has never been so important!

TLW manufacture most of the VEWWhygiene products within the UK and, as a result, are able to offer reliable and consistent supply at very competitive rates.

Should you need products that are outside of our range, please reach out to us for immediate assistance and we will do everything possible to help you.

- Size 146x88x38mm
- Weight approx 100g
- High body temperature hint $\geq 37.5^{\circ}\text{C}$ (199.5°F) (can be set)
- Grade of waterproof IP22
- Electric shock internally powered ME equipment
- Applied part Type BF applied part, including the whole unit
- Mode of operation continuous operation
- Product life 5 years
- Standard EN60601-1, EN 12470-5, ASTM E 1965-98

What's included:

- Infrared thermometer
- User manual
- AAA battery x 2

Face visors offer more effective protection against Coronavirus than masks and should be worn by the public whenever they leave home according to US physician and epidemiologist Michael Edmond. Edmond, an infectious diseases physician and hospital epidemiologist in Iowa City, USA, has been advocating the use of face shields on his blog. He believes the simple devices are more effective than masks at protecting the eyes, nose and mouth from Covid-19 infection and praised efforts by architects and designers to manufacture the devices as “one of the silver linings of this pandemic”.

Face Visor/Face Visor+

- Face Visor +, certified to ENBS166:2001
- Face Visor +, uses 50% less plastic than standard visors
- Protection for mouth, nose and eyes
- One solid piece. No pieces will become unattached
- Foam band – latex free approved for medical use
- Covers full face and allows normal speech without being muffled
- No pressure points on the head
- Lightweight
- Adjustable strap
- Easily disposable
- White as standard. Can be fully branded or printed in any colour, design or message. Printed using vegetable based inks
- Manufactured in the UK

Q20-0105

VEWbeam is a free standing table lamp that spreads UV light around a room, destroying any bacteria that comes into contact with the light.

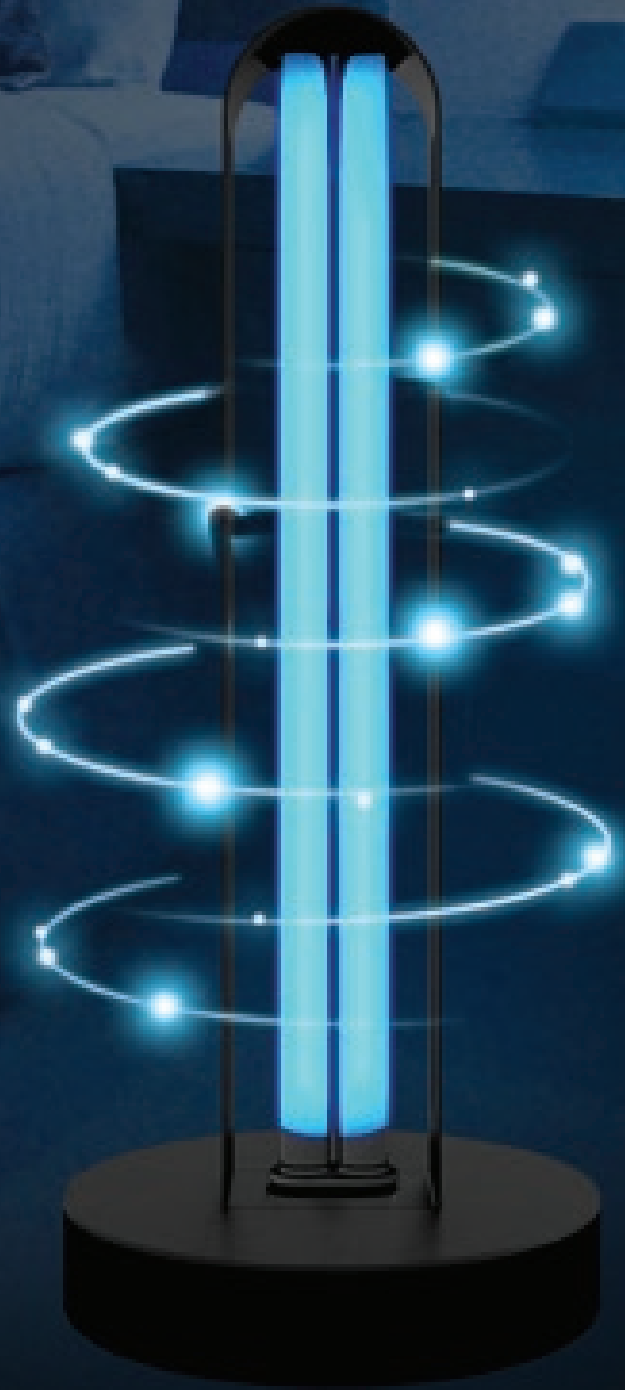

Key Features:

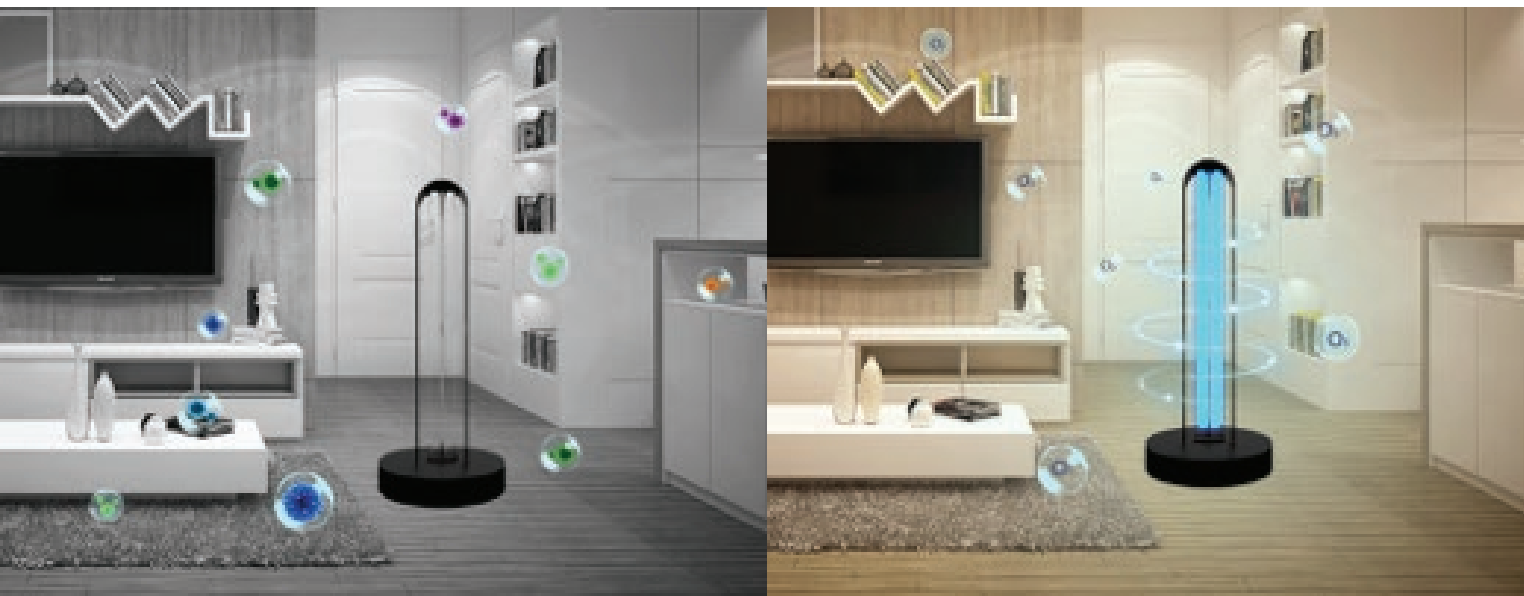

- Wattage: 38W
- Wavelength: 254um
- Quartz Glass Tube
- Tested to EN/T19258-2012
- Timer settings: 15, 30, 45 & 60mins
- Includes remote control

Key Benefits:

- UV-C light kills 99.99% of bacteria, viruses, mould and micro-organisms that can cause illnesses
- Clean, quick and effective
- Portable and easy to use without the need for training
- Improves indoor air quality with regular use

U60-0100	Vewbeam 38w UVC Germicidal Lamp
U60-0200	Vewbeam 38w UVC Germicidal Lamp Ozone

- A 360 degree Ultraviolet light that kills 99.9% of bacteria in its surrounding area
- A quick and safe solution to disinfecting rooms against germs and viruses
- A solution that produces no chemical bi-products
- Simple to use and easy to store
- Germs are sensitive to ultraviolet light. When exposed to them for an extended period the radiation eliminates them and cleans the area
- The product comes with a remote control or a timer function to ensure the user is able to set the timer on the light and exit the room before the light comes on, keeping them safe from the UV rays

Benefits of UV-C light

- UV-C light uses short-wave ultraviolet radiation in the "C" band 253.7nm
- Also referred to as UVGI (ultraviolet germicidal irradiation), UV-C penetrates the outer structure of the cell and alters the DNA molecule, preventing replication and causing cell death. UV-C light is not a new technology for sanitising and killing germs
- Has been used since the late 1880s to kill micro-organisms
- It was used extensively after WWII for disinfecting air in hospitals, food storage areas and pharmaceutical facilities
- Later used in the 1950s in the war against tuberculosis. In the 1960s, concerns about microbes lessened with the introduction of new drugs and disinfecting cleaners
- More recently UV-C light has been trialled as the new tool to combat superbugs, especially in healthcare environments where it is widely used to disinfect wards and isolation rooms

For further details, prices and to order contact T +44 (0)1302 741941 E sales@tlwglobal.com

Ultraviolet radiation can cause skin and eye burns, please pay attention to the advice. Avoid direct exposure with the human body or with animals. The room must be empty of humans and animals before the light is switched on to ensure no exposure to the UV rays
