

### LED Tapes

#### Pack Contents

- LED tape reel with 2m power lead

#### Important Safety Information

This product is powered by an LED driver (sold separately).  
Installation should be carried out by a qualified electrician.

#### Installation (for LED tape use)

1

Ensure the surface is clean and dust free. If a professional cleaning solution is being used, then please ensure enough time is left for the surface to dry

2

Cut the LED tape to the desired length if required. It can be cut every 25mm along the bronze copper marks

3

Fix the LED tape to the surface. Apply pressure along the length to ensure a firm bond

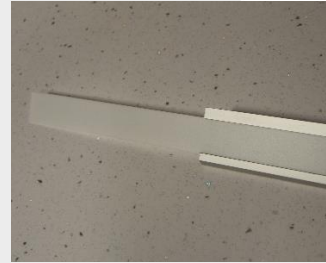

4

The micro connector plug on the LED tape power lead should be placed into the black distribution block on the LED driver (sold separately)

### LED Tapes

Installation (for use with aluminium profile – sold separately)

1

The aluminium profile, diffuser and LED tape can be cut to the desired length if required

2

Remove the diffuser from the aluminium profile. The profile end cap where the cable exits needs to position the cable

3

Insert the LED tape and diffuser – ensure all filings and swarf are removed before applying the LED tape

4

Fix the profile into place using the clips provided
